HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

Examiner, Art Unit 2129

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: claims 1-3, 9, and 10 renumbered as 1-5 are considered allowable since when reading the claims in light of the specification, as per MPEP §2111.01 or *Toro Co. v. White Consolidated Industries Inc.*, 199 F.3d 1295, 1301, 53 USPQ2d 1065, 1069 (Fed. Cir. 1999), none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims, specifically wherein the ascertaining unit is adapted to determine a plurality of association probabilities for each event class which has two or more sets of comparative values representing the same event class, and the selection unit is so designed that, for those event classes which have two or more sets of comparative values representing the same event class, it forms average values of the corresponding association probabilities and upon extraction of the highest association probability uses the average values instead of the individual values; and wherein in those event classes which include two or more sets of comparative values representing the same event class, the sets of comparative values correspond to different offsets in the centering of the centered physiological as disclosed in

independent claims 1, 11, 21, 31 and 32 of the instant application (as defined at pg. 5 and 10-12 of the specification of the instant application).

2. A practical application for the invention is disclosed on page 2: "In order to achieve acceptable sensitivity to the signals of physiological events and acceptable distinguish ability [sic] of events with the known apparatuses, it is necessary, during the cardiac cycle in which an event occurs, to suspend the recording of further physiological signals. However such suspension excludes the reliable detection of various important classes of intracardial events and the effective treatment thereof, thus for example an abnormal relationship between the two chambers of the heart. Therefore the object of the present invention is to provide an improved apparatus for the classification of physiological events, in particular intracardial events, which helps to overcome the above-specified disadvantages."

3. A computer readable medium for the claimed apparatus has been interpreted as being a tangible memory for an implantable medical device such as a cardiac pacemaker or a defibrillator.

The Prior art of reference *Esteller et al.* (*Esteller*) (USPN 6,594,524) in view of *Gillberg* (USPN 6,393,316) discloses an apparatus for the classification of physiological events, comprising: a signal input for the input of a physiological signal representing or constituting a physiological event; a classification unit for classifying the physiological signal on the basis of its signal shape, the classification unit comprising: a transformation unit which is designed to carry out transformation of the physiological signal in such a way that as the output signal it outputs a number of values representing the physiological signal and based on the transformation; and a probabilistic neural network which is connected to the transformation unit to receive the values and which contains a number of event classes which represent physiological events and which in turn are each represented by a set of comparative values, which probabilistic neural network is adapted on the basis of the comparison of the values with the comparative values to effect an association of the physiological signal represented by the values with one of the event classes; and an adjusting unit for centering the physiological signal in a time window of predetermined window width and for outputting the centered

physiological signal to the transformation unit, the adjusting unit connected upstream of the transformation unit.

The Prior art of reference *Esteller* in view of *Gillberg* and further in view of *Echaz* discloses the apparatus for the classification of physiological events, wherein the probabilistic neural network further comprises: at least one ascertaining unit for determining association probabilities of the physiological signal with the event classes on the basis of the comparison of the values with the comparative values of the respective event class and for outputting the ascertained association probabilities; a selection unit which is connected to the ascertaining unit for receiving the association probabilities and which is adapted to extract the highest association probability from the association probabilities and to associate the physiological signal with the event class having the highest association probability.

Neither *Esteller* and *Gillberg* nor *Esteller*, *Gillberg*, and *Echaz* teach the ascertaining unit is adapted to determine a plurality of association probabilities for each event class which has two or more sets of comparative values representing the same event class, and the selection unit is so designed that, for those event classes which have two or more sets of

comparative values representing the same event class, it forms average values of the corresponding association probabilities and upon extraction of the highest association probability uses the average values instead of the individual values; and wherein in those event classes which include two or more sets of comparative values representing the same event class, the sets of comparative values correspond to different offsets in the centering of the centered physiological as specified in the independent claims of the instant application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
